Head of Marketing

**Welcome
to
Binding Site**

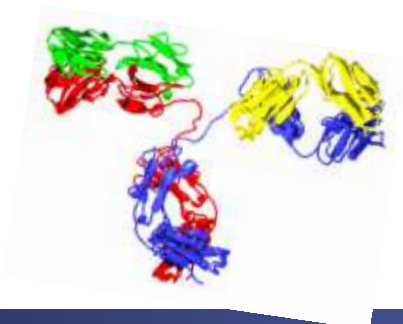

The Specialist Protein Company

What we do is all about proteins...

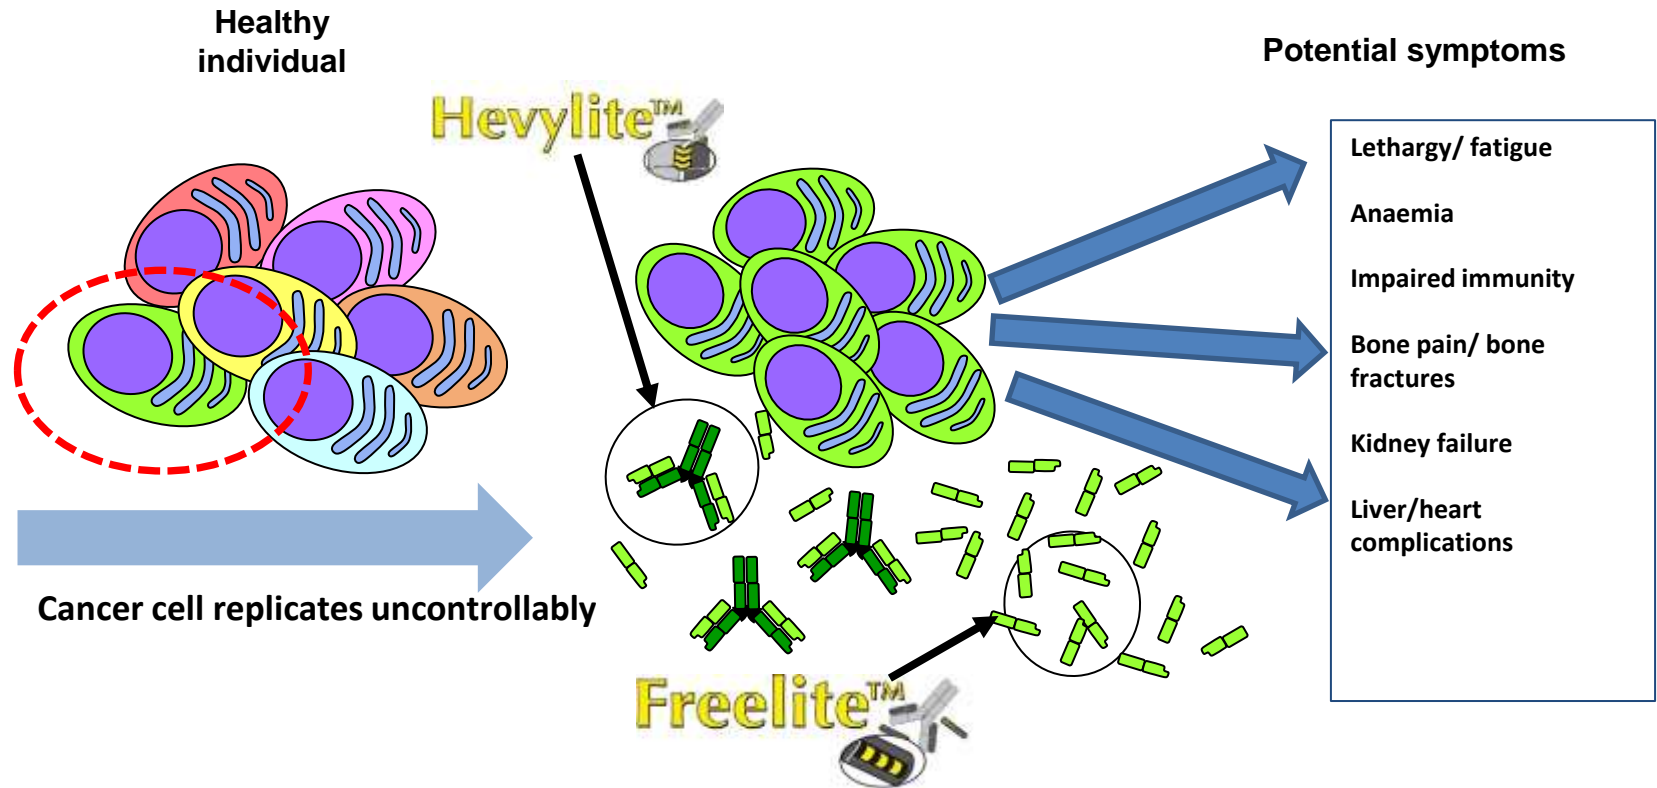

- Founded 30 years ago, and a spin-out from Birmingham University, Binding Site specialises in developing diagnostic tests which leverage the role of proteins in the detection and monitoring of disease
- We develop exquisitely specific antibodies against proteins which previously were unquantifiable in routine clinical use. We aim to make step-change improvements in patient care
- We utilise expertise, know-how and intellectual property gained over the years to manufacture a range of world class products
- With 400 employees in the UK and 200 elsewhere, almost all of our research, development and manufacturing is here
- 93% of our revenues come from exports

... and patients

Innovative Assays

Multiple myeloma

Our Lines of Business

Installed base of instruments

Oncology kits

- Unique and complimentary proprietary tests for malignancies of the immune system
- Used in diagnosis, monitoring and prognosis
- More than 8 million Freelite tests annually
- Further utilities and applications being developed

Immune Status kits

- Broad range of specialist immune status diagnostic kits
- Multiple applications in assessment of immune system function and post treatment recovery after transplant/vaccination
- Further applications being explored
