Zero-Bills.co.uk

## Sustainable Development from £99k

An intelligent home that listens and learns from its occupiers, offers revolutionary controls including a [service dashboard](#).

Ergohome is a 2 bed roomed detached home that can be set at different heights according to local needs such as undercroft parking. Ergohome is capable of being stacked to 3 storeys high. Targeted at "first and last" homeowners, it is packed with convenience features that deliver very low maintenance and running costs. Made from sustainable materials it satisfies environmental concerns whilst delivering modern stylish living.

Company Number: 06130877  
Registered Address:  
Suite 213  
27 Colmore Road  
Birmingham UK  
B3 2EW

Ergohome provides a unique combination of answers to today's housing challenges:

- Ready for immediate delivery it is an instant solution to the current housing shortage. It removes the financial uncertainty and site delays common to most building projects.
- Built from high specification components in the factory it delivers both high performance and reliable operation.
- Renewables designed in from the start means that both initial installation and subsequent upgrades are quick, easy & affordable.
- Accessibility for frail residents is an invisible part of the interior “ergonomic” design, delivering both style as well as everyday usability.
- A flexible modular design, it can be deployed in different ways and even relocated should owners geographical needs change over time.
- The home design includes; open plan kitchen area and living room with an external balcony, bathroom, small bedroom and main bedroom.
- Deployable at heights up to 2.1 metres, residents are immune to natural disasters such as floods, its robust chassis engineering also make it subsidence proof.
- Including digital technology, owners get the benefits of the latest connectivity and assistive solutions such as telemedicine. High-tech features such as remote heating control, wireless light switches, under floor heating and electric windows come with every home.
- “[Zero-bills](#)” it eliminates fuel poverty for ever for everyone
- Already passing UK building regulations and planning hurdles means that it should be easy to commission quickly around the country.
- Affordable, starting at £99,000 it has a design life exceeding 60 years

## Background

Ergohome has been 10 years in development by serial entrepreneur Paul Chadwick. Paul has been thoughtfully trying to address many of the housing issues prevalent in the UK and taking onboard the climate change challenge at the same time. Back in 2007 work started with the University of Birmingham to examine super insulated panel technologies. Ergohome is proud to be based in the heart of UK manufacturing in the West Midlands, the concept and execution has been 100% British. The company “Ergohome Ltd.” was formed 5 years ago in 2007.
